

User Stories

As a gourmet, I want to read restaurant reviews so that I can eat try new and exquisite dishes.

As a couple, we want to reevaluate hotel reviews so that we can plan vacation trips together.

As a college student, I want to share trip plans with my friends so that we can go out together.

As a college student, I want to read about the mountains of Korea so that I can go on hiking trips.

As a traveler, I want to know the history behind famous monuments so that I can be more knowledgeable about them.

As a mother, I want to find new places in Korea so that our family gets to have a family trip to wonderful places.

As a student, I want to learn the geography of Korea so that I can get good grades on my social studies class.

As an international professor in Korea, I want to visit places in Korea so that I can learn new cultures in Korea.

As a chef, I want to collect all the regional recipes from different providence, so that I can make the best out of them to create a good restaurant.

As a foreigner, I want to look for public transportation travel route so that I can travel without a car.

As a foreign traveler, I want to learn basic sentences in Korean or in local dialect so that I can communicate with local people.

As a traveler, I want to know information for local festivals so that I can enjoy my travel more.

As a shop/restaurant/hotel owner, I want to post introduction or promotion information so that more people would visit my shop/restaurant/hotel.

As a student, I want to see the costs of travelling to a country so that I can plan my budget.

As a content producer for the app, I want to mark locations on the map and add details so that I can share interesting places.

As a local person using the app, I want to suggest edits to the description of my local area so that other users would get accurate data on my area.

As a person who has visited an area, I want to share my experience and important information so that other users can prepare to travel.

This could use some organization:

Group like 'actors' together. List all the use cases based on student in a section.

Be a bit more descriptive. For instance: As a student, I want to see the costs of travelling to a country so that I can plan my budget.

What types of costs will be included? Hotel/Hostel? Public Transportation, Optional Events, Typical Restaurant prices, etc.

Also, this 'User Story' can easily apply to most of your categories, especially traveler, foreign traveler, student, mother, etc.

Avoid using 1st person, "I". Phrase more directly like: "A gourmet can use the system to search for restaurant reviews. The system returns reviews matching provided keywords." "A foreign traveler can search for information on public transportation. The system returns routes, schedules, and costs."

So, even though these are 'use cases' for iterative development, they need to have a bit more detail or development will not be focused.

Add numbers or other designations to the use cases to make it easy to reference them (in other documents or in comments in the actual source code).

Low Organization: -0.5

Low Detail: -2

No numbering or designations: -0.5

Score: 37 of 40
